

Secure visual project management software

Secure, Searchable, Simple...!

Overview of LYNX

Secure Digital Media Management Software

- **LYNX is a complete turn-key solution for securing and managing all your project digital images and media.**
- **LYNX was designed by contractors for contractors, it's specifically built to handle construction projects, and aid in the construction management/documentation process.** (File based image applications are designed for everyday digital photography, which is fine for personal and recreational photo management, but these applications are not equipped or intended to be used as a "documentation tool".)
- **LYNX has a proven track record. We have been helping Government agencies and Construction firms better manage their projects for 15 years! Our clients have saved millions in expenses, not to mention reducing if not eliminating costly claims and litigation disputes.**
- **LYNX secures your data and stores all media in ONE database!** (File based and other image systems just link back to image files. These files are scattered all over and can easily be moved, deleted, copied, altered, leaked, etc.) **If your image management program allows you to "touch up" the photos, then it is NOT a good choice for construction documentation.**

Features/Benefits

In construction time is money, and all the documentation in the world is meaningless if you can't find it, or it's been tampered/modified with. One image can show and explain what pages of time consuming notes can't.

In seconds, (2 mouse clicks) a field person can acquire, annotate, and file images/media to their project. (LYNX then automatically compresses the data to a fraction of it's original size and sends it up the chain to the home/regional office, and LYNX WebServer program. Now it can be accessed and used by anyone given permission via the web, slide shows, printouts, etc.

Find your digital images in seconds, and then securely communicate them to all project partners as needed. Link images to any other application such as Primavera, Meridian, Microsoft, Sharepoint and other file-based systems.

Clarify issues instantly! Save travel, redundant walkthroughs, etc.

Create and email visual punch lists to reduce trips, walkthroughs, and eliminate mistakes and confusion on project activities.

Keep everyone visually up to date automatically and instantly from anywhere in the world.

Set up and Implementation Summary

- Set up and implementation is instantaneous with LYNX.
- Program is instantly available for download from the LYNX website
- User Trainings take approximately 10 to 15 minutes (Extremely User Friendly!)
- We even help create a “best practice” and custom tutorial with screen shots specific to your application!

Return on Investment

- Having all your digital media secure and available instantly is priceless. We have had clients who have been awarded millions of dollars by using their images in LYNX to win construction claims. (File-based systems simply take up too much valuable time and can potentially cost a company everything.)
- Photos are naturally large in size. Unlike documents and other files, photos can be a very tricky thing to manage and communicate because of the file size of the image/s.
- **For example 1000 images taken with a typical digital camera today will require 3.2 Gigabytes of space, and would take approximately 8 hours to send from a jobsite to the home office/website, sharepoint web server, etc., and that's if your using a solid T1 line with 1.5 MBPS up and down. With LYNX these same 1000 images at the same resolution would only need 220 MB of space, and would only take 24 minutes to transfer! Imagine how much time and resources you will save over the duration of a project.**
- Just the savings in resources, and the difference in the amount of time it takes to transfer this data will pay for the program within weeks!
- LYNX works with all of your existing hardware, including your existing digital cameras & PC's. **No extra cost or need to buy new equipment !**

Pricing Corporate

- Start-Up & Yearly Pricing LYNX
 - Each main office (headquarters, satellite offices, etc. would need a Master License which, including the first year of support, would be less than \$5,000. (After first year, support would only be \$690 and this includes all upgrades including version changes as well as toll-free tech support).

Pricing Project

- Each project site would run as little as \$2,000 (for small projects) and even the larger projects should not exceed \$10,000 for a multi user server install. This includes support for the first year as well. (After the first year, support would be just 20% of the project software price)

Pricing LYNX WebServer

- \$6,000 for the LYNX WebServer (includes first year of support). (after the first year, support would be \$1000 annually)

Availability

- LYNX can be downloaded, installed, and ready to use in minutes!
- Flexible licensing and pricing allows you to get exactly the type of licenses and number of users to fit your needs without hurting your budgets!

Comparison Note:

- LYNX is the only construction secure digital media project management system available. (“sole source” document available if needed)
- Seeing is believing. There are too many features and benefits in LYNX to even try and compare to a generic, commercial file based image management system. Please contact us for an online demonstration in order to “see” exactly how LYNX can revolutionize the way you manage your media, and your projects! And, if you’d like us to do a comparison between LYNX and any other type of digital image management program, we’d be happy to do so!
