

If a picture is worth a thousand words...then LYNX is worth Millions!

Walk every project right from your pc, or mobile device. Use any web browser to look at all your jobsite photos. View, search and print work in progress, work completion to verify payments, and go back in time to any point or critical path!

When finger pointing starts, you will be able to instantly go back in time and “SEE” exactly what occurred when, and by whom!

- Use your Internet phone to see what's going on right now (or any device with Internet access)
- Compress and manage *all* of your digital photos from *all* of your projects in one, secure database
- Communicate your photos to anyone in the world instantly
- Link project images to other third party applications (that allow hyperlinks)

Good visual documentation is the most important form of documentation you can have. It is not subject to interpretation like written documentation.

Make sure you have reliable secure visual information available when you need it.

- **Secure**
- **Searchable**
- **Simple**

**How do you manage your digital media now?
Can you find images instantly?
Are you using your daily walkthrough images as a project management tool?
Do you have visual support for your written documentation?**

How Easy is LYNX to use?

Acquire images and media with just two mouse clicks! Batch annotate images with captions, notes, user defined search fields and much more.

“We have primarily used LYNX to catalog and store photos of construction in progress. However, one benefit that we enjoy is the ease in which LYNX prepares web pages. The format is simple to use and takes very little time each week to process.”

—Rob McWilliams, Department of Commerce

If needed, why is the security of the images important?

“I was concerned about finding a software product that would provide security that would stand up to challenges in court, allow for annotations of the images by our investigators and have flexible search capabilities. I chose LYNX because I found no other product that matched its wealth of features. Again, I can’t commend your company enough on a product that has proven so useful and indispensable to our agency.”

—Kurt Murine, Sheriff-Coroner, Department of Orange County, CA

How do I communicate with others using digital images?

“LYNX is an asset to the design/build industry. LYNX gives us the capability to store multiple projects in an organized fashion and create albums which are a highly effective communication tool for us, our subs, and Clients.”

—Ryan J. Pierrot, Vanderweil, Process and Industrial Design-Construction

How much time are you wasting trying to find, manage and archive your photos as individual picture files that contain no information and are scattered all over the local, network, and removable drives? What is that time worth to you?

Can you find them quickly and easily by using multiple search criteria and date ranges? Are they protected from being deleted, copied, altered and lost?

LYNX has all of these features and more. Give us a call for an on-line or on-site demonstration and let us show you what LYNX can do for you.
