The LYNX Master License – Step One

The Master License is considered the “Main Warehouse” for *all* of your digital photos for *all* of your projects. It is the ONE secure database for all to access (with rights) and to update the LYNX Web Application (See the LYNX Web Application License). A Master License is the first consideration in a typical LYNX Configuration. It will control all of the users/groups and all of the project photos company wide. User Licenses for the Master are concurrent (meaning you may install the License on as many workstations as you’d like but only a specified amount of users may log in at one time). The Master License includes ONE concurrent User License in its cost of \$3,450.00 plus \$690.00 a year for Annual Support. If you’d like to add on additional concurrent user licenses to the Master, they may be purchased for \$1,200.00 plus \$240.00 a year for Annual Support. (Support includes all updates to the software)

LYNX Web Application

View, search, save, print and create hyperlinks to link images to schedules, documents, calendars...any third party application that accepts hyperlinks – and rest assured, those links will work! There's no chance of the photo's file name being changed, altered or accidentally deleted, leaving you with nothing to show and useless links.

Now, send that hyperlink to anyone that needs to see your photos with all of the information you need them to see attached. This reduces, if not eliminates, redundant walk-thru's and can help tremendously in emergency situations. The LYNX Web Application works with your Master License and gives anyone that you give rights to access to any photo or group of photos via the Internet. With a one-time fee of \$5,000.00 plus \$1,000.00 a year for Annual Support, the LYNX Web Application is a MUST linking to third party applications, instant communication and to show off your best work!
(Support includes all updates to the software)

LYNX Web Users

The LYNX Web User Licenses are a crucial piece of the Web Application. Each authorized user will be able to utilize the Quick Acquire Tool (see Quick Acquire Tool Configuration) to upload, view, search, print and create hyperlinks to their project photos. The low cost of \$250.00 per Web User plus \$75.00 a year for Annual Support makes it easy for all of your personnel to easily upload and access all of their project photos via the Internet and communicate those photos and information easily to others. These licenses are not concurrent. Rights are determined by username and password. Viewing photos with attached information from the LYNX Web Application from the Internet is always free!

Open up "Projects" on the Web for the ability to view your specific project photos on the Web. Each new "Project" to set up is: \$1,850.00 plus \$370.00 a year for Annual Support.
(Support includes all updates to the software)

Quick Acquire Tool Users

Included with your “Web Users” license (See LYNX Web Users). This tool will allow the people out in the field to not only upload their project photos to the main office (using the LYNX Compression tool)...but file them to the single database at the main office where they are secured, with all of the information everyone will need to see. This tool will save your sites *hours* of time in uploading photos – not to mention that these files are not just being uploaded into folders upon a folders on a server back at the main office, possibly named img0001.jpg, but now they are secured in one secure database where the file name cannot be changed and the photo cannot be altered, modified or deleted (without rights). Now, they are instantly accessible on the Web.

Imagine the time that will save you! Imagine the bandwidth and resources that will save you! Imagine the headaches that will save you!

If you're uploading photos from a project site to a main office through the Internet...you NEED LYNX!

Jobsite/Remote Licenses

Similar to the Master License, although the Jobsite/Remote License cannot create its own “project”, a local database would be installed at the jobsite to upload, annotate and manage the project’s digital photos. The Remote License is ideal for jobsites that may not have reliable Internet (or no Internet access) or if they simply want their own local database – or the company doesn’t own the LYNX Web Application.

If any of the above apply, LYNX is still a breeze. Project personnel may Quick Acquire into the database (still only 2 mouse clicks) and packet transfers may be made from the Remote License to the Master License (either manually or automatically) so that all project sites and headquarters are up to date on their project photos.

For the same cost as opening a “Project License” on the Web, at \$1,850.00 plus \$370.00 per year for Annual Support, the Remote license is the ideal choice for these project sites. User Licenses are concurrent (the original purchase includes one concurrent user license) and additional User Licenses may be added to the Remote for \$1,000.00 plus \$200.00 a year for Annual Support.
